

DATASHEET

# RapidIdentity

**RapidIdentity is a full-lifecycle Identity and Access Management suite, giving organizations greater security, increased business agility, and lower costs of IT management.**

One of the largest challenges of today's organizations is managing employee access to the data and systems they need, without sacrificing security or exposing the organization to needless risk. When an employee joins an organization, moves within it, and eventually leaves, their access needs change, and the organization must keep up.

Many organizations have been able to manage this manually in the past, using internal IT resources, or have used a traditional identity management system. But faced with an exploding number of external, cloud-based applications, increasing employee movement, and greater reliance on contractors and partners, traditional systems are often unable to keep up, forcing organizations to either move slower or open themselves up to increased security risk.

**Unlike other Identity and Access Management solutions, RapidIdentity offers:**

### **Time-based access expiration**

Only RapidIdentity offers time-based access expiration, which enforces security without being dependent on periodic and manual re-certification campaigns. Access is renewed when – and only when – it is necessary, significantly reducing security risk.

### **Flexibility for external users**

RapidIdentity grants unparalleled support for external users who don't exist in local directories or other systems of record through the entire identity lifecycle.

### **Massive scalability**

RapidIdentity deployments are highly scalable, with proven support for millions of users.

### **True support for hybrid cloud environments**

RapidIdentity's LogicEngine facilitates connections to virtually any endpoint, whether on-premises or in the cloud. The Logic Engine toolkit – RapidConnect - enables IT to easily configure new connections and complex data transformations.

### **Feature parity across IT environments**

Adaptable to your organization's unique needs, RapidIdentity is available on-premises or in the cloud as a managed service, with no sacrifices in functionality, features, or security.

### *FAST FACTS*

---

*Intelligently manage user access to any connected system*

---

*Broad multi-factor authentication*

---

*Secure single sign-on*

---

*Time-based access expiration*

---

*Auditable trail for compliance*

---

*Delegate approvals to individual function owners*

## Key Features

### Complete identity lifecycle support

Manage identities throughout the entire identity lifecycle, including access and governance.

### Powerful workflow designer

Industry-leading workflows are highly-configurable and can control virtually any connected system.

### Robust delegation model

Full delegation of Group Management in Active Directory and eDirectory environments.

### Automated provisioning

Automated and secure provisioning, de-provisioning, and real-time access updates, dictated by changes in your seamlessly connected systems.

### End-user self-service

Allow end-users to manage their own accounts and set and reset passwords according to unique organizational policies, without the need for IT help desk support.

### Secure single sign-on

Boost productivity with single sign-on access to every on-premises or cloud-based system.

### Broad multi-factor authentication

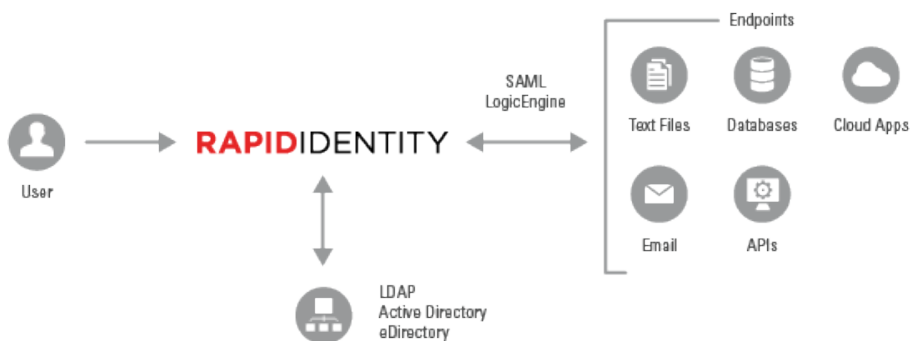

Enhance security with multi-factor authentication across all applications.

### Comprehensive identity governance & compliance

Grant your IT department and managers clear insight into which employees have what access, and ensure security through time-based certification, sponsorship, and re-attestation.

### Security on any device at any location

Peace of mind for organizations that rely on contractors, vendors, or outside partners of any type who require access to sensitive applications and data on their own devices, no matter where they need to get their work done.

## RAPIDIDENTITY

RapidIdentity includes four primary modules:

### RapidPortal

User interface, account and profile management, workflows and access management

### RapidConnect

Bi-directional connections, account provisioning, single sign-on (SSO), and data transformation across any system.

### RapidFederation

SAML engine provides account provisioning and single sign-on to SAML-enabled applications, including 1000's of cloud apps.

### RapidFolders

HR-driven access to Windows filesystem folders online, from anywhere.

Since 2004, Identity Automation has focused on intelligently automating provisioning, access, and account management. Our mission is to securely put control of these crucial tools in the hands of the users who need it most — employees and managers. RapidIdentity, our sophisticated, easy-to-use identity management software, makes every user a power user, increasing enterprise security and agility, boosting productivity across the board.
