

The Leader in Identity Management and EMR Integration for Physicians and Nurses

Provide better care while meeting HIPAA and HITECH guidelines with integrated identity management from Identity Automation

Today more than ever, physicians and nurses require advanced technology to succeed in their growingly complex missions. Hospitals are under tremendous pressure to deliver exceptional care in an efficient manner, all while meeting HIPAA guidelines.

Many hospitals are modernizing their operations to implement new identity management platforms that keep pace with point-of-care environments and support instant, secure communication, mobile data access and fluid teams. All of this is happening at a time of tight budget constraints, with administrators looking for ways to accomplish more with less.

We know the unique challenges hospitals face, and RapidIdentity equips administrators and front line caregivers with the integrated tools needed to succeed.

RAPIDIDENTITY

RapidIdentity includes
four primary modules:

RapidPortal

User interface, account and profile management, workflows and access management

RapidConnect

Bi-directional connections, account provisioning, single sign-on (SSO), and data transformation across any system.

RapidFederation

SAML engine provides account provisioning and single sign-on to SAML-enabled applications, including 1000's of cloud apps.

RapidFolders

HR-driven access to Windows filesystem folders online, from anywhere.

RapidIdentity Healthcare Edition

Identity Automation's RapidIdentity Healthcare Edition is an identity and access management platform specifically designed for physicians and nurses. This powerful, easy-to-use software enables hospital administrators to simply and securely manage care team access throughout the entire patient experience.

Unlike other Identity and Access Management solutions, RapidIdentity offers:

1. Quickly configured pre-built connections to Epic and other popular EMR applications — no developers required.
2. Increased efficiency through single sign on and multi-factor authentication.
3. Optimized workflow and enhanced mobility through systems that quickly accommodate user transitions.
4. Data privacy by consolidating system access and control.
5. Massive scalability to meet your specific needs, whether department-wide, facility-wide, or organization-wide.
6. User account management driven seamlessly from your current HR, ERP, and Financial systems.
