

5 Reasons to Choose ExactAccess

A BETTER SINGLE SIGN-ON REPLACEMENT FOR CARADIGM USERS

We save approximately \$500 per device by running HealthCast ExactAccess with Windows embedded on HP thin clients—with 1,000 devices deployed, that's a savings of \$500,000 in hardware costs alone.

Shawn David, CTO
Rockford Health System

With Caradigm's enterprise single sign-on solution being sunsetted in 2019, Caradigm customers face the challenge of choosing a replacement. Before you're forced to go through a costly and disruptive rip-and-replace, it's important that you understand you have a choice in your next eSSO solution. There are other, better options than Imprivata—such as ExactAccess.

1. LEVERAGES YOUR EXISTING INFRASTRUCTURE

ExactAccess leverages your current hardware, avoiding additional costs and disruptions to current operations as systems are migrated. Deploying Imprivata SSO requires a complete overhaul of your solution, including a rip-and-replace of your current hardware set-up with pre-configured hardware.

2. AVOIDS DISRUPTIONS DURING MIGRATION

ExactAccess is designed to run with Caradigm, so organizations can efficiently migrate systems over without negatively impacting clinician workflows or patient care levels. However, when Caradigm organizations transition systems over to Imprivata, disruption to current operations is an unavoidable reality. Depending on the complexity of current systems, this can lead to large amounts of clinician downtime and patient dissatisfaction.

3. ONE PRICE WITHOUT THE NICKEL-AND-DIMING

Migrating to a new eSSO solution is a major investment. Added fees and unexpected expenses are the last thing your organization needs. That's why we include all the innovative features of our award-winning eSSO solution under a single price and only charge for the number of user licenses you actually need. With Imprivata, additional functionality comes at an additional charge, and you'll pay license fees for every user in your hospital directory.

4. FAMILIAR USER INTERFACE

ExactAccess has a similar client/server architecture to Caradigm. This familiar look and feel translates to a smoother transition, less user disruption, and decreased change management fatigue for clinicians. Instead of spending valuable time learning new technology, clinicians stay productive and have more time for patients. Plus, with ExactAccess, users still have time-saving access to an application toolbar—except they no longer need IT assistance for set-up, and there's no limit to the number of applications that can be pinned.

5. DON'T JUST TAKE OUR WORD FOR IT

ExactAccess was ranked healthcare's **#1 Single Sign-On solution in 2017** and 2018 by KLAS Research based on having the highest customer ratings. With unique features, such as drag-and-drop application integration, support for mixed device environments, and innovative proximity badge functionality, it's easy to see why KLAS recognized HealthCast as the Category Leader for SSO, a distinction reserved for solutions that earned top honors in their segment for helping healthcare professionals provide better patient care.

MAKE THE SMART CHOICE

Just because you currently have Caradigm doesn't mean you have to migrate to Imprivata. HealthCast has deep experience with Caradigm migration and a proven track record of successful Caradigm replacements. And with Identity Automation's recent acquisition of HealthCast, we're pleased to offer healthcare organizations the industry's most complete and integrated Identity and Access Management (IAM) solution, giving healthcare a better alternative to address their regulatory, identity lifecycle, and integration challenges.

Because the HealthCast Single Sign-On is so easy to use, the transition to something new in the EHR world is much smoother.
