## ROGUES' GALLERY OF EMPLOYEES

The Three Rogue Employees Bringing Unwanted Risk to Your Company

A significant security vulnerability often overlooked is the internal threat — employees and ex-employees. Many of the biggest attacks originate from inside the enterprise from fully authenticated users. And these **rogue employees** don't always have malicious intent; sometimes they're dedicated employees who mistakenly committed an oversight.

Beware the three types of rogue employees often overlooked by enterprises.

and rebellious. She presents great risk precisely because she's good at her job. She's always looking to use the newest technology and thinks she knows the best, fastest, or most efficient process. She's constantly looking for an advantage — a better, more productive way to work — even if that means circumventing corporate IT policies.

The Innovative is creative, ambitious, resourceful, efficient,

often, he's an Access Hoarder or Over-Privileged employee, thinking he's doing good for the company, but possessing a sense of entitlement. He demands to be involved in as much as possible, racking up access to systems and refusing to relinquish it, while simultaneously opening the organization up to increasing points of potential external attack.

master cyberthief stealing proprietary information. Most

**The Lazy** brings a high degree of sloppiness and low degree of attention to his compliance with your IT policies In fact, he may not even understand or know about your security protocols. He is most concerned with his own personal convenience and has no desire to learn anything new. He sticks to the systems he already knows, even if your company doesn't approve of those.
