

## RapidIdentity Cloud: Security & On-Demand Scalability

RapidIdentity Cloud is a modern, Software as a Service (SaaS) application that leverages the RapidIdentity Identity and Access Management (IAM) platform. Running on the Amazon Web Services (AWS) platform, RapidIdentity Cloud delivers a full-lifecycle IAM solution with multi-layered security and on-demand scalability for increased business agility.

Using state-of-the-art technologies, RapidIdentity Cloud is a fully functional IAM system that parallels the robustness of on-premise deployments for a fraction of the IT costs— without sacrificing performance.

RapidIdentity Cloud provides quick time-to-value as it is provisioned for customer use in minutes with pre-configured Authentication, Challenge, and Claim policies out-of-the-box. In addition, RapidIdentity Cloud can be tailored to meet an organization's specific and unique IAM needs.

### **Multi-Layered Security**

RapidIdentity Cloud uses AWS logical and physical isolation capabilities, as well as industry standard encryption to deliver dedicated instances of RapidIdentity. By providing each Cloud customer with their own tenant of RapidIdentity, identity data is isolated and protected.

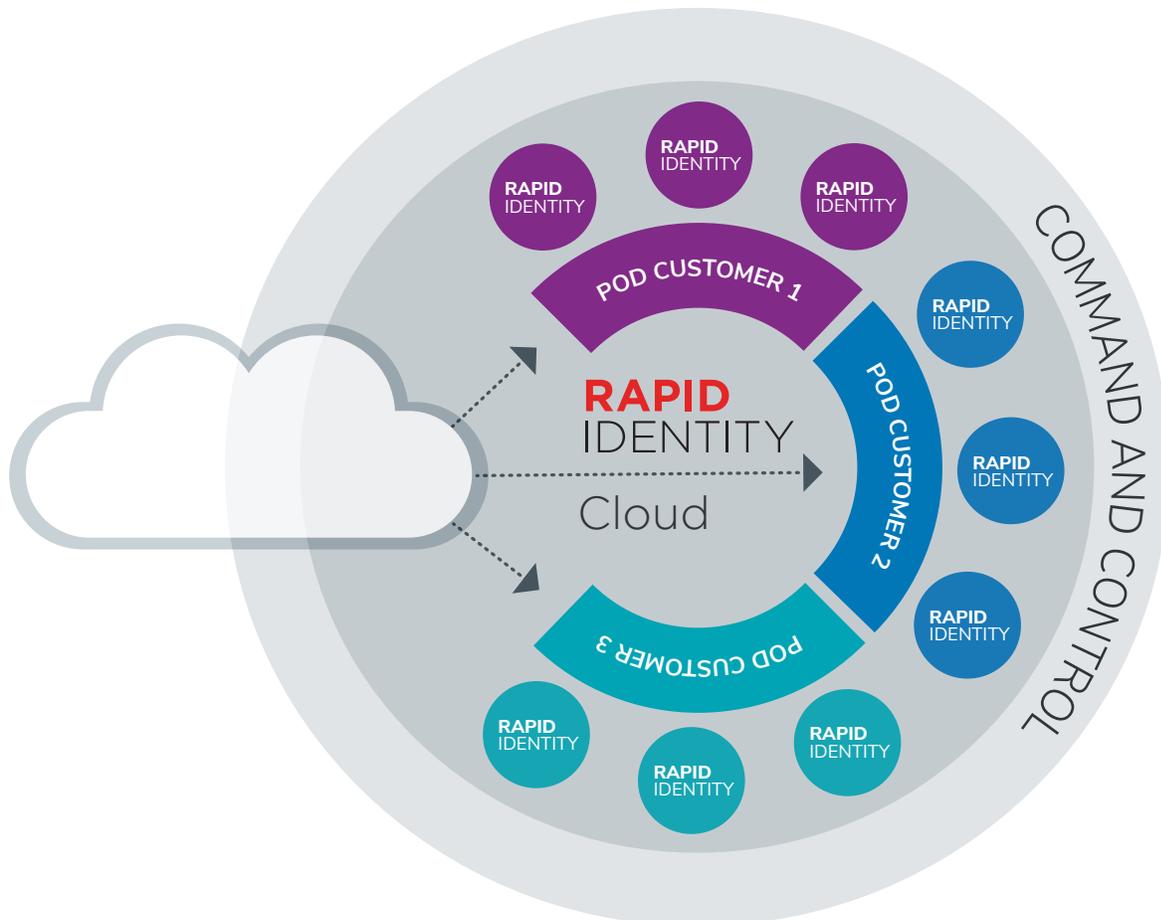

### **On-Demand Scalability**

By leveraging elastic scaling technologies, RapidIdentity Cloud tenants are automatically scaled based on CPU utilization and other defined metrics. This makes it easy to quickly auto-scale the application up or down in response to each customer's custom performance metrics.

### **Highly Available**

RapidIdentity is designed to fail over between Availability Zones which are more scalable, highly available, and fault tolerant, vs. traditional data center infrastructures. RapidIdentity Cloud is constantly monitored and includes a 99.9% Service Level Agreement (SLA).

RapidIdentity Cloud provides tenant isolation and encryption in both transit and rest to ensure complete protection of customers' identity data.
