

RapidIdentity EPCS

SECURE E-PRESCRIPTION WORKFLOWS

RapidIdentity EPCS is a frictionless, DEA-compliant Multi-Factor Authentication (MFA) solution for securing electronic prescription of controlled substances (EPCS) workflows. Designed with efficiency and security in mind, RapidIdentity EPCS quickly and securely verifies clinician identities when placing prescription orders, while direct EMR integration with e-prescribing workflows gives clinicians a single, streamlined workflow for all medications. Not only does this reduce the risk of handwritten prescriptions being stolen or forged, it decreases patient wait times by sending prescriptions directly to their pharmacy of choice.

FRICTIONLESS MFA

Verify clinician identities using flexible MFA methods, including biometrics, push notifications, and OTP tokens.

DIRECT RX DELIVERY

Securely send medication orders directly to the pharmacy, reducing the risk of prescription tampering.

EMR INTEGRATION

Streamline clinician workflows with direct EMR integration that provides a seamless non-intrusive experience.

ACCESS CONTROLS

Set access controls that ensure proper process is in place for giving EPCS permissions to approved providers.

AUDIT AND REPORTING

Establish an audit trail that demonstrates end-to-end compliance with EPCS regulations.

SUPERVISED ENROLLMENT

Facilitate the process of enrolling credentials and aligning with MFA modalities after identity-proofing.

STRENGTHEN PRESCRIPTION SECURITY

Eliminate the risk of hand-written prescriptions being stolen, altered, or forged by sending electronic orders directly to the pharmacy. RapidIdentity EPCS secures these workflows with a variety of DEA-compliant, MFA options for verifying clinician identities, including biometrics, push notifications, and OTP tokens.

INCREASE CLINICIAN PRODUCTIVITY

Manually refilling prescriptions, reconciling medication lists, deciphering handwriting, and rectifying errors detracts from clinician productivity. Through direct EMR integration with e-prescribing workflows, our EPCS solution secures the process, while giving clinicians a single, streamlined workflow for all medications.

IMPROVE PATIENT SAFETY AND CONVENIENCE

RapidIdentity EPCS supports efforts to take the guesswork out of filling prescriptions and ensures patients receive the correct medication by securing access to e-prescribing workflows. Plus, by sending prescriptions orders directly to a patient's pharmacy the experience is quicker and more convenient for patients.
