

QwickAccess

Secure Proximity Badge Access
to Local and Virtual Desktops

What is QwickAccess?

Secure Proximity Badge Access to Desktops

QwickAccess (QA) provides fast and secure access to desktops, including Windows and HP Linux desktops and all major VDI environments (Citrix, VMware, and RDS). Clinicians simply tap their badges to login, secure or log-off their individual sessions, or “tap over” another user’s session to secure that session and start their own unique session. QwickAccess’s unique “roll-over password save” feature is activated with each badge tap, adding another layer of convenience and rewarding HIPAA-compliant user behavior. QwickAccess also supports true user roaming to another computer, without leaving the first session exposed as other solutions do.

Designed for healthcare organizations of all sizes, QwickAccess is easy to deploy, requiring almost no support. Clinicians gain more time to spend with their patients, while maintaining HIPAA compliance with patient data privacy rules.

Secure, Fast, Flexible

Proximity Badge Access to Local and Virtual Desktops

QwickAccess enables users to quickly and easily gain access to their workstations with the simple tap of their badge. Designed with more than just increasing clinician productivity in mind, QwickAccess also improves user convenience, streamlines workflows, and strengthens security and HIPAA compliance.

By eliminating the need to manually enter passwords, QwickAccess saves users up to an hour every day.**

100%

In a recent HealthCast survey, 100% of QwickAccess users surveyed saw a noticeable increase in convenience and productivity.*

“HealthCast has been supremely reactive. It’s phenomenal how responsive they are. We deal with many vendors, and HealthCast is the very best.”

Manager/Analyst, KLAS, April 2018

QwickAccess

Benefits

Saint Luke's Health System

Saint Luke's challenge was to strengthen security measures under HIPAA regulations that made it slower and more cumbersome for clinicians to access computerized patient information. Saint Luke's also wanted to meet meaningful use criteria necessary to qualify for stimulus funding, as well as meet their long-term goal to eliminate paper records.

Clinicians are saving time each day; for example, we have had physicians say they are able to see two to three more patients a day with the additional time it saves them.

Michael Kamer, IT Manager
Saint Luke's Health System

HealthWest Community HealthCenter

With healthcare organizations needing to comply with higher healthcare standards after Health Information Technology for Economic and Clinical Health (HITECH) was enacted, HealthWest faced new challenges that had a negative impact on daily operations, productivity, and employee satisfaction. Employees at HealthWest had to manually login 3 different times at each workstation, which could sometimes take up to 3 full minutes. Such a long login process halted productivity and frustrated employees.

The gain in productivity was quite noticeable. On average we gained about 5 minutes per provider/nurse team per visit due to the HealthCast implementation and the additional automation that resulted.

Clark Geslin, CIO
HealthWest, Inc.

The biggest risk I noticed when I would walk through a clinic was open computers. It's difficult for people to remember to lock their screens. Thanks to QwickAccess this has become an issue of the past, just today I walked down an exam lane hall and all of the computers were locked and secure. I feel like QwickAccess has helped make compliance simple.

Mike Krause, VP
Boonya Systems

Northwest Vision Institute

Northwest Vision Institute was looking for a solution that would decrease the number of password lockouts their clinicians were experiencing and allow their clinicians to more easily roam from room to room. The solution needed to be simple, efficient, and easy to deploy and manage, all while having a minimal impact on IT.

Our workflow has become much smoother now that we can move from room to room with ease.

Supervisor
Northwest Vision Institute

Galen Medical Group

Galen Medical Group of Chattanooga, TN was founded in 1992 with the mission of elevating the health of their community through multiple medical specialties and excellent care. However, time is one of the most precious resources for healthcare professionals, and having to type passwords numerous times a day was frustrating and slowing down the organization's staff.

We've increased user satisfaction by eliminating the frustration associated with manually entering passwords numerous times per day.

Derek Spraker, Director of IT
Galen Medical Group
