

RapidIdentity Lifecycle Management in Higher Education

Higher education institutions face unique challenges in managing the identities of their diverse user populations. Complex organizational structures and decentralized IT environments add complexity and can lead to inconsistent identity management practices. Budget and staffing constraints can limit their ability to implement and maintain sophisticated identity and access management systems. Higher Education needs a **cost-effective, scalable solution** that can be integrated with existing systems and processes without disrupting education and research.

RapidIdentity Lifecycle is tailored for higher education, automating provisioning, deprovisioning, account changes, and access management for all users, including students, staff, partners, and vendors. Its intelligent security policy ensures seamless access to needed resources while maintaining productivity, whether managing student access to course materials or granting secure access to sensitive internal systems. With features like **risk-based conditional access** and InCommon federation support, it dynamically enforces security based on user behavior and risk.

Identity Management at Scale

Higher Education IT departments onboard and offboard thousands of users at once. RapidIdentity **automates the full user lifecycle**—for not only students and staff but also vendors, contractors, and external partners—increasing efficiency.

Baseline Affiliation and Lifecycle Management

Managing identities with multiple affiliations is a common challenge in higher education. **RapidIdentity Lifecycle Management simplifies and automates the processes of provisioning, deprovisioning, account updates, and assigning new access rights for all types of users.**

Identity Management Audit and Reporting

RapidIdentity provides comprehensive audit logging, pre-built reports, and **Security Information and Event Management (SIEM) systems integration**. Every action is logged in the central audit database, whether a user logs in, accesses applications, performs self-service tasks, or delegates tasks within the portal. The system maintains a complete history of each user's identity lifecycle, logging role and constituency changes.

Features Tailored to Educational Needs

- Lightweight Access Certification Workflows
- High Volume Identity Change Event enablement on Large Populations
- Rapid Integrations with On-Prem and Cloud Applications & Services
- Full Cloud Delivery
- Frictionless New Account Claiming and Onboarding

Product Features

Unique ID and Identifier Assignment

RapidIdentity ensures that all user objects across the system receive unique IDs by pulling data from authoritative sources and creating a single, comprehensive record for each user.

Identity Data Hygiene

The IAM service incorporates multiple layers of data validation, enhancing source data processes to ensure that irregular user data is not processed.

Identity Matching

RapidIdentity is capable of matching identities across multiple source systems, even in the absence of a standard unique ID.

Identity Fulfillment

RapidIdentity Connect enables the bidirectional flow, transformation, and validation of data between otherwise disconnected systems.

Account Claim

RapidIdentity offers a fully automated and customizable account claim process. This includes a configurable URL for the Account Claim page, an automatically generated Claim Code, and notifications via SMS or email.

RapidIdentity Lifecycle is the ideal solution for streamlining identity management in higher education, providing secure, seamless, and efficient access for everyone in your academic community.
